"Experimental Investigation of the Effect of Carbon Disulfide on Mice Exposed to Work Stations at the 'Viskoza' Factory."

Belgrade, Glasnik Zavoda za Zdravstvenu Zastitu NR Srbije,
Vol 11, Nos 3-4, 1962, p 11-58.

Abstract: /Authors' English summary modified/ Groups of mice (153 in all) were exposed to 0.5 to 200 gamma of carbon disulfide per liter of air 6 hours a day for 10 days. The control group numbered 40 mice. Subsequent microscopic study of liver, lungs, and brain tissue showed degeneration, peribronchial and subpleural extravasation, subependymal hemorrhage, and proliferation of the cerebral neurologia. Similar but milder changes were also noted in 1/1/the control group. No references.

"Laboratory Diagnosis of Incipient Saturnism."

Zagreb, Arhiv za Higijenu Rada i Toksikologiju, Vol 13, No 3, 1962; pp 189-194.

Abstract [English article]: Studies with CaEDTA (Mosatil Tableoids, Bayer) 3 Gm./24 h. once, urinary Pb polarography and urinary coproporphyrin spectrophotometry in 29 printers and 18 Pb smelters: average values were 0.236 and 0.2476 - 1.233 mg. Pb/24 h. Urinary excretion over 0.34 mg. Pb/24 h. is considered pathognomonic of lead poisoning in this type of provocation test, and contraindicates any further work exposure. Controls twice yearly are advisable in selected occupations. Five tables, 3 Yugoslav and 14 Western references.

"A Contribution to Laboratory and Experimental Research
into the Caisson Syndrome."

Belgrade, Glasnik Zavoda za Upravstvenu Zastitu SR Srbije,
Vol 11, Nos 3-4, 1962, pp 48-50.

Abstract: Authors' English summary modified There was a
significant difference in the increase in the number of
thrombocytes in workers who had been working in the
field of caissons at least one year and in workers else-
where employed. No data of importance were derived from
other laboratory analysis. Tests on rabbits were in-
sufficient for definite conclusions. The authors advise
a thrombocyte count during the periodic checkups of
caisson workers. Four tables, Western references.

"The Celiac Syndrome in Cystic Fibrosis of the Pancreas"
Belgrade, Grski arhiv za celokupno lekarstvo, Vol 93, No 9
Sep 65, pp 847-851.

Abstract: The authors described clinical history of a child who
from birth showed symptoms of cystic fibrosis of the pancreas in
the form of pathological jaundice accompanied by progressive res-
piratory difficulties during the neonatal period. In the second
and third years of life, celiac syndrome crises appeared as a result
of intolerance to milk and gluten, and then as a result of bron-
chial ectasia parenteral infection. Lack of gluten and milk in food
and anti-infection therapy successfully overcame the celiac syndrome
and only the continuance of respiratory difficulties remained.

"The Isolation and Identification of Intestinal Viruses
from Domestic Pigs."

Belgrade, Acta Veterinaria, Vol. 11, No. 1-4, 1962, pp. 1-10.

Abstract: Authors' English summary modified: The authors
isolated 18 cytopathogenic agents from the feces of 1
pigs from several farms in northeast Yugoslavia, using
cultures of kidney tissues. The isolated agents were
from yellowed pigs, and other ones apparently not having
been exposed to viruses. The isolated agents were charac-
terized by pronounced cytopathogenicity, qualitative resis-
tance to ether and chloroform, titer from $10^{4.5}$ to
 $10^{6.7}$ TCID₅₀, some neutralization with 1:50 serum, and
no effect on other animals. The conclusion is that the
isolated agents are not intestinal viruses. References: 4

Petrović, M. M. MIHAIL

Petrović, Mihail. Elementary observations on the distribution of small prime numbers. Glas Srpske Akad. Nauka 189, 5-45 (1946). (Serbian)

The author considers the problem of finding the number of primes of the respective forms $6x+1$, $6x-1$ not exceeding a given small limit L . The practical method of actually counting the primes is not allowed. The author finds instead the number of composite numbers of the same form not exceeding L by counting approximately the number of lattice points under a certain hyperbola. The results are not too accurate. The number of primes $6x+1$ under 1000 comes out 69 rather than the correct 86. There are numerous examples. *D. H. Lehmer* (Berkeley, Calif.).

"Basophilic Granulocytes in Undernourished Infants"

Belgrade, Srpski Arhiv za Celokupno Lekarstvo, Vol 94, No 4, 1968, pp 507-553

Abstract: [Authors' English summary modified] While studying the change in the number of basophilic granulocytes in undernourished infants, the authors found lower values than in healthy children. The number of basophilic granulocytes increased in convalescence. Death occurred in all patients with the lowest number of basophilic granulocytes - from 0 to 2 per mm³ of peripheral blood. The authors are continuing this study in order to arrive at a definite conclusion. There are 1 Yugoslav and 21 Western references. (Manuscript received, 4 Mar 66.)

PETROVEANU M.

The mechanism of hydrolytic reaction of β -aryl- β -bromoacrylic acids. I. Zugrăvescu, R. Ralea, and M. Petroveanu. *Analele chimie*, 1958, 27, 1001. *Ann. N.Y. Acad. Sci.* 100, 1958, 1001. The kinetic study of the hydrolysis of β -RC₆H₄-COCBr:CHCO₂H (R = H, Me, OMe) showed that at 65.5° the nucleophilic substitution reactions of the halogen atom were of 1st order, which proved that under these exptl. conditions the intermediate COC⁺:CH was possible. The reaction order did not change with R which proved that at this temp. the conjugation of the olefinic bond was strong enough to produce decoupling of the conjugation $\pi-\pi$, where the halogen atom was attached. The values of the rate consts. diminished in the order R = H > Me > OMe (ρ = 0.81). From the reaction at 65.5° it was detd. that with R = H, the hydrolysis followed a precise S_N1 mechanism, while with R = Me, or OMe, the mechanism was probably a mixed one. This fact suggested that the formation of the cation was possible when R = H, while the other substituents inhibited this formation. At 45° with R = H, the reaction went by a mixed mechanism, while the other two hydrolyzed so slowly that the reaction could not be measured. The Hammett σ factors for Me and OMe in *p*-substitution of benzoic esters, calcd. from sapon. reactions of these esters, could be applied to this reactions. The Hammett const. ρ in this case was 0.81. A discussion of the mechanism was given. Melita Pecht-Horowitz

TITLE: Measurements of atmospheric radioactivity for 1964

SOURCE: Meteorologicke zpravy, no. 3, 1965, 82-88

TOPIC TAGS: atmospheric radioactivity, radioactive fallout

ABSTRACT: Data are given from measurements of atmospheric radioactivity with respect to monthly, weekly and daily fallout for 1964 at eight weather stations in Czechoslovakia. The maximum readings of atmospheric radioactivity were $4.64 \mu\text{C}/\text{m}^3$ in Hradec Kralove on 8 May 1964, $8.11 \mu\text{C}/\text{m}^3$ in Prague on 6 April 1964 and $15.8 \mu\text{C}/\text{m}^3$ in Bratislava on 14 July 1964. This is 30% of the maximum in the preceding year for Hradec Kralove and 73% of the 1963 maximum for Bratislava. The average reduction for radioactivity of atmospheric aerosol in Hradec Kralove was 29% of the 1963 average, while the corresponding reduction for Bratislava was 53%. The highest monthly fallout was $148 \text{ mc}/\text{km}^2$ in Churanov which is 49% of the maximum in 1963 at this same station and 58% of the maximum monthly fallout for 1962 (in Prague). The highest total monthly fallout was also observed in Churanov for 1964-- $787 \text{ mc}/\text{km}^2$ --as well as the lowest reduction in comparison with 1963--about 30%. The average fallout for other stations

TITLE: A simple method of calculating the half-life of radioactive fallout in the atmosphere

SOURCE: Meteorologicke zpravy, no. 1, 1965, 17-18

TOPIC TAGS: radioactive fallout, atmospheric radioactivity, radioactivity measurement

ABSTRACT: This article describes a simple method of calculating the half-life of nuclear fallout over Czechoslovakia based on records kept at stations in Churanov, Hradec Kralove, Bratislava, and Chopok of HMU and UFA of CSVA in Hradec Kralove for 1961 through 1964. Time periods for recording fallout were based on maximum counts six months after major experimental atomic explosions elsewhere in the world, such as the spring of 1958 after a total fallout of 30 megatons in 1956, 50 megatons in 1957, and 30 megatons in the spring and 20 in the fall of 1958. Fallout in 1961 and 1962 was measured in the fall, when maximums were recorded. Equations are given for calculating fission products produced in each of the four years, amounts accumulated in the stratosphere, and amounts which fell to earth (which averaged 23% of the "radioactive reservoir"). An equation is developed, which establishes 2.7 years as the half-life of fission products suspended in the stratosphere. Tables give the

UDC: 551.510.53

Cord 1/2

L 10602-66

ACC NR: AP6000387

3

amounts and years of origin for fallout registered in each of the four years, and successive increments of fallout contamination by half year periods. WMO (World Meteorological Organization) data are quoted establishing a half-life of five years for fission products in the stratosphere up to 30 km above the equator, and for their dropping out above polar regions in the course of one year. This would indicate the probability that fallout half-life in the stratosphere increases slightly as fission products drop out of lower strata. Orig. art. has: 9 formulas and 3 tables.

Petrovic, R. *Katastar voda. [Hydrologic survey.]* *Yugoslavija. Hidrografski Statisticki Glasnik*, 1(1):46-50, Aug., 1948. In Serbian. DWB—The author discusses the form and the content of the surveys of water energy. These can be worked out as a general survey, or a survey of water supply, water transport, melioration, etc. The surveys must contain a description of the region and the observational points, and tables and graphs of hydrologic characteristics (annual and extreme variations of the level, runoff, pollution of water, ice conditions, etc.). *Subject Headings:* 1. Water supply survey 2. Yugoslavia. —N.T.Z.

 Petrovic, R. Kistatir vodnih snaga sliva Zapadne Morave (Priloz). [Survey of water power resources of the delta of western Moravia. (Outline).] In: *Hidrometeorološka Služba. Hidrometeorološki glasnik*, 2(1/2):114-121, 1940, 16p., map, 4 tables. In Serbian. DWB—An analysis of the survey of regional, meteorological, hydrological, and geological characteristics carried out for Sweden, Austria and the U.S.S.R. Author presents a detailed review of water resources of western Moravia, with extensive data on runoff for many points on this river. Special attention is paid to low-power hydroelectric stations. *Subject Headings:* 1. Water resources 2. Runoff 3. Western Moravia 4. Yugoslavia.—N.T.Z.
